

### Pure epoxy (3:1) resin based high performance anchoring grout

#### **DESCRIPTION**

MasterFlow 936 AN is a two component (3:1) pure epoxy resin based high performance anchoring grout for use in cracked and uncracked concrete. Designed for post-installed rebar connection applications, MasterFlow 936 AN offers a very high load-bearing capacity. The system can be installed in percussive and diamond drilled dry, wet and flooded holes.

#### **FEATURES AND BENEFITS**

- Fixings close to free edges
- Fire tested
- Versatile
- Anchoring without expansion pressure
- Ultra High load capacities
- Available in side-by-side cartridges (385ml) (585ml)
- Component volume ratio of 3:1
- Extended gel/open time
- · Suitable for diamond-drilled holes
- Suitable for dry and wet holes

### **USES & APPLICATIONS**

- Post installed rebar connections
- Crash barriers
- Structural steel

#### **APPROVALS & TESTS**

- ETA according ETAG 001 Part 1 & 5 Option 1 for anchoring of threaded bars into cracked & uncracked concrete.
- ETA according to TR023 for post-installed rebar connections.
- Tested according to LEED 2009 EQ c4.1, SCAQMD rule 1168 (2005).
- Fire resistance F240 for reinforcing bars
- A+ as per French VOC Regulation

#### **PACKAGING**

**MasterFlow 936 AN** is available in boxes of 12 side-by-side cartridges of 385ml & boxes of 12 side-by-side cartridges of 585ml.e

#### **INSTALLATION PROCEDURES**

Please refer to the method statement or contact Master Builders Solutions Technical Services department.

#### **SHELF LIFE**

Cartridges should be stored in their original packaging, the correct way up and in cool dry conditions (+10°C to +25°C) out of direct sunlight. When stored correctly, the shelf life will be for 12 months from the date of manufacture.

#### **PRECAUTIONS**

For detailed Environmental, Health and Safety information, please consult and follow all instructions on the product Material Safety Data Sheet. Contact your local Master Builders Solutions office for the latest version

## **WORKING & LOADING TIMES**

Resin cartridge Temperature	T Work	Base Material Temperature	T Load
+10 to +15°C	40 mins	+10 to +15°C	18 hrs
+15 to +20°C	25 mins	+15 to +20°C	12 hrs
+20 to +25°C	18 mins	+20 to +25°C	8 hrs
+25 to +30°C	12 mins	+25 to +30°C	6 hrs
+30 to +35°C	8 mins	+30 to +35°C	4 hrs
+35 to +40°C	6 mins	+35 to +40°C	2 hrs
	Ensure cartı	ridge is >10°C	

Note: T Work is at the highest temperature in the range. T load is at the lowest temperature in the range

### **PHYSICAL PROPERTIES**

Property		Unit	Value	Test Standard
Density		g/cm³	1.5	ASTM D 1875 @ +20°C / +72°F
Compressive Strength	24 hours	N/mm²	75	
	7 days	N/mm²	95	ASTM D 695 @ +20°C / +72°F
Tensile Strength	24 hours	N/mm²	18

HDT	7 days	°C	49	ASTM D 648 @ +20°C / +72°F
VOC		g/L	4.5	ASTM D 2369

## THEORETICAL NUMBER OF FIXINGS PER CARTRIDGE

Applies to installations in solid substrates only

Cartridge Volume	h <sub>ef</sub>	Ø8	Ø10	Ø12	Ø16	Ø20	Ø25	Ø32
	i i ei	Drilling Ø 12mm	Drilling Ø 14mm	Drilling Ø 16mm	Drilling Ø 20mm	Drilling Ø 25mm	Drilling Ø 32mm	Drilling Ø 40mm
385ml side	10d	65	43	30	17	8	4	2
	12d	54	35	25	14	7	3	1
by side	20d	32	21	15	8	4	2	1

**Note:** Jobsite/contractor installations usually result in more resin being injected than the theoretical requirement resulting in lower number of fixings per cartridge. The reduction to the number of fixings per cartridge in practice is greater for smaller diameter holes and shallower embedment depths

Steel strength must also be considered and the lowest value controls.

Partial safety factor y1.4

For resistance values in higher temperatures, please contact Master Builders Solutions Technical Services.

All the above resistance values are considering combined pull out and concrete cone failure in tension and steel failure in shear. The above load values are for long term temperature of -40°C to +50°C and short term temperature of +70°C

## **MASTERFLOW 936 AN WITH THREADED RODS**

Steel strength must also be considered and the lowest value controls.

Partial safety factor y 1.4

Design resistance and recommended resistance in tension are only valid for single anchors without close edge considerations for combined pullout and concrete cone failure and concrete cone failure. Steel failure is not considered by these calculations.

Design resistance and recommended resistance in shear are only valid for single anchors for steel failure without lever arm. The above load values are for long term temperature of -40°C to +50°C and short term temperature of +70°C
